ADD BEAUTY AND GRACE TO YOUR GARDEN

The graceful weeping habitat of the Japanese Maple will make a distinctive addition to any garden or large planter. These unique trees are delicate in size, often slow growing by nature, and have lacy leaves that come in a myriad of colours.

Discover the perfect Japanese Maple at Sheridan Nurseries! With one of the largest selections in the region, you're sure to find the ideal specimen to complement your outdoor space beautifully.

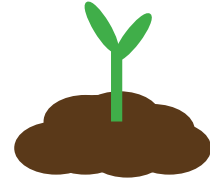

LIGHT REQUIREMENTS

Japanese Maples prefer morning sun with some light afternoon shade to prevent leaf scorch and stress. If planted in a more shaded area, the foliage will be more vibrant in colour.

WATERING GUIDELINES

Immediately after planting, water the tree thoroughly to settle the soil and eliminate air pockets around the roots. Because they have shallow root systems, they prefer consistently moist soil, but it's important to avoid over watering, which can lead to root rot.

SOIL PREFERENCES

Japanese maple trees prefer soil that is light, rich in organic matter, and well-drained. The soil should be slightly acidic and between 5.5 to 6.5 pH.

FERTILIZER

During the first summer, fertilize with a liquid fertilizer. Once established, use a slow-release fertilizer designed for low pH feeders.

MULCHING

Since Japanese Maples are shallow rooted, apply a 2 inch layer of mulch over the root zone (without the mulch being directly piled up against the tree trunk) to help prevent moisture loss and sun damage.
